Psych 156A/ Ling 150: Psychology of Language Learning

Lecture 1
Introduction

## Administrivia

Instructor:
Lisa Pearl, Department of Cognitive Sciences
Ipearl@uci.edu

## Teaching Assistant:

Tayopa Mogilner, Department of Cognitive Sciences
tmogilne@uci.edu

## Administrivia

Class web page:
http://www.socsci.uci.edu/~|pearl/courses/psych156a_2008spring/index.html
Accessible from EEE, as well. Contains overview, schedule, readings, course assignments, and grading policies. $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Administrivia

$\qquad$
Assignments
Homework:
Several throughout the quarter, usually due 1 week after they're assigned
Collaboration is allowed and encouraged. However...
You may discuss the homework together, but you must write up your answers separately. $\qquad$
You must write the name of your collaborators on your assignment when you turn it in. $\qquad$

If you do not do both these things, it will be considered academic $\qquad$ dishonesty and you will receive a 0 for that assignment.

## Administrivia

## Assignments

n-Class Quizzes:
Several throughout the quarter, usually after we've covered a topic

These are open-note
They will usually comprise a small portion of the class period, not the entire thing.

These are not collaborative. Anyone found collaborating on an in-class quiz will receive a 0 for that quiz.

## Administrivia

Final assignment:
You may choose to either take a final in-class exam 6/12/08 from 4pm-6pm, or submit a final paper by the same time. You only need to do one of these. If you are worried about your grade, you may choose to do both and take the higher of the two grades.

You must indicate which you will do by $5 / 29 / 08$. Please email the instructor with your choice, and indicate your paper topic if you choose to do the paper.

Final exam:
The final exam will be closed-notes and non-collaborative.
If you are found using any kind of notes or collaborating with other $\qquad$
classmates during the final exam, you will receive a 0 .

## Administrivia

Final paper:
In place of a final exam, you will write a final paper reviewing an article on language learning. Details are listed on the web page. $\qquad$
Main components:
By the end of week 9: inform instructor and teaching assistant of article you will write your final paper on. This should be done via email.
$\qquad$

By the time of the final ( 4 pm on $6 / 12 / 08$ ), you will email your paper to the instructor and teaching assistant (.doc format preferred, but .pdf okay as well).

Papers must not be collaborative efforts. The paper must be written up individually. If you plagiarize someone else's work, you will receive a 0 for the paper.

Administrivia
Grades

Homework: 40\%
Quizzes: 40\%
Final Assignment (Exam or Paper): 20\% will be assessed by the scale on the web page.

90-100: A+
75-80: B+
85-90: A
80-85: A-
70-75: B
65-70: B-

## Knowledge of Language

It's so natural for us to produce and comprehend language that we often don't think about what an accomplishment this is

Or how we learned language in the first place.

## About Language

anguage is a complex system of
knowledge: includes sound structure,
word structure, sentence structure,
mapping from sentence structure to meaning, unspoken rules of conversation..

Languages can differ significantly on how they instantiate this knowledge.

Don't goblins like children?
Goblins like children.

goblins
goblin (plural) $=$ goblin $+\mathbf{s}$
And despite all this complexity, children of all
languages acquire the necessary
knowledge to speak their native
language.
gablinz

## Jackendoff (1994)

"For the moment, the main thing is to appreciate how hard a problem this is. The fact that we can talk (and cats can't) seems so obvious that it hardly bears mention. But just because it's obvious doesn't mean its easy to explain."

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Kids Do Amazing Things

Much of the linguistic system is already known by age 3.

when kids can't tie their own shoes
or even count to 4 . $\qquad$
$\qquad$
What kids are doing: extracting patterns and making generalizations from noisy data sets without explicit instruction.
"Rules" of language = grammar

## A learning analogy: Set

Task: Find Sets.

Here's one:

What generalizations might you make about Sets?
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

A learning analogy: Set
Task: Find Sets.
Here's one:
0
What generalizations might you make about Sets?
Set = all shapes, fills, and number of items the same?

## A learning analogy: Set

Task: Find Sets.
Here's another one:
0100
Does this fit the generalization?
Set = all shapes, fills, and number of items the same?

## A learning analogy: Set

Task: Find Sets.
Here's another one:

## 01000

Does this fit the generalization?

Set = all shapes and fills the same?

## A learning analogy: Set

Task: Find Sets.
Here's another one:
0 0100
What about this one?

Set $=$ all shapes and fills the same?

## A learning analogy: Set

Task: Find Sets.
Here's another one:

## 0104

What about this one?

Task: Find Sets.
Are these Sets?
Set $=$ all fills the same?

Task: Find Sets.
Are these Sets?
Set $=$ all fills the same?

## A learning analogy: Set

Task: Find Sets.
Here are some more examples of sets: $\qquad$
O 11380

| 0 | 88 | 000 |
| :--- | :--- | :--- |
| 8 | 88 | 010 |

$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## A learning analogy: Set

Task: Find Sets
Here are some more examples of sets:

$\qquad$
there's noise.

Noise Analogy: "All these are Sets."

## 0 88000

$\qquad$
$\qquad$
$\qquad$

Knowledge of Language \& Hidden Rules
Some examples from language:
You know that..
.strep is a possible word of English, while stvep isn't.

Knowledge of Language \& Hidden Rules
Some examples from language:

You know that.
..."Who did you see who did that?" is not a grammatical question in English
$\qquad$
(Instead: "Who did you see do that?") $\qquad$
$\qquad$
$\qquad$

Knowledge of Language \& Hidden Rules
Some examples from language:

You know that..
...In "She ate the peach while Sarah was reading", she $\neq$ Sarah
but she can be Sarah in all of these:

Sarah ate the peach while she was reading. While she was reading, Sarah ate the peach.

Knowledge of Language \& Hidden Rules $\qquad$
Some examples from language: $\qquad$
You know that.
the ' $s$ ' in 'cats' sounds different from the ' $s$ ' in goblins
cats: 's' = /s/
goblins: 's' = /z/

$\qquad$
$\qquad$
$\qquad$

## Why rules?

The expressive variety of language use implies that a anguage user's brain contains unconscious grammatical principles" - Jackendoff (1994)

Example: Most sentences we have never seen or used before, but we can still understand them.

Question: Can speakers simply memorize all the possible sentences of a language the way they learn vocabulary of their language? Not if there are an nninite number of them

## Linguistic Infinity

Hoggle has two jewels.
Hoggle has three jewels.
Hoggle has four jewels.
Hoggle has forty-three million and five jewels.

One (dumb) way to get infinity

## Linguistic Infinity

An aardvark is not an antelope. Another way to get a really
An aardvark is not a zenith. large number of sentences

A penguin is not a goblin.

## Linguistic Infinity

An aardvark is not an antelope. Another way to get a really
An aardvark is not a zenith.
A penguin is not a goblin.

And another.
If an aardvark is not an antelope, then an aardvark is not an ant.

If an aardvark is not a zenith, then a peach is not an idea.
If a penguin is not a goblin, then a fruit is not a fairy.

## Linguistic Creativity

## What lists include this sentence?

Through dangers untold and hardships unnumbered, I have
fought my way here to the castle beyond the goblin city to take back the child you have stolen, for my will is as strong as yours and my kingdom is as great.

> Or this one?

In the purple powder room, there lived a grumpy dollop of cream that slept lazily and yelled silently by turns, often scaring the silverware with its fierce pacific nature.

## Linguistic Infinity

The point: our minds store words and meanings and
the patterns into which they can be placed (grammar).

## Sentence Patterns: <br> Hoggle has $n$ jewels.

An $X$ is not a $Y$
Since an $X$ is not a $Y$, a $Z$ is not a $W$.

## Linguistic Infinity

A more complex pattern: X Verbs that [sentence]

This shows recursion because " $X$ Verbs that [sentence]" is itself a sentence.

Sentence --> X Verbs that Sentence

## Linguistic Infinity

A more complex pattern: X Verbs that [sentence]

This shows recursion because " $X$ Verbs that [sentence]" is itself a sentence.

Sentence --> X Verbs that Sentence
$\qquad$

Sentence --> Hoggle thinks that [Sentence]
--> Hoggle thinks that [Sarah has Jareth's attention].
--> Hoggle thinks that [Ludo knows that
--> Hoggle thinks that [Ludo knows that
Didymus suspects that
[Sarah has Jareth's attention]]]. $\qquad$

Possible objections to a mental rule set
"Why should I believe I store a set of rules
unconsciously in my mind? I just understand sentences because they make sense."

## Possible objections to <br> a mental rule set

"Why should I believe I store a set of rules unconsciously in my mind? I just understand sentences because they make sense.

But why do some sentences make sense and others don't?

Hoggle has two jewels.
*Two Hoggle jewels has
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Possible objections to a mental rule set

$\qquad$
"Why should I believe I store a set of rules
unconsciously in my mind? I just understand sentences because they make sense." $\qquad$
But why do some sentences make sense and others don't?

Hoggle has two jewels.
*Two Hoggle jewels has
Why can we recognize patterns even when some of the words are unknown?
'Twas brillig, and the slithy toves did gyre and gimble in the wabe...
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Possible objections to a mental grammar

"What about people who speak ungrammatically, who say things like
We ain't got no bananas'? They obviously don't have grammars in their
heads.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Possible objections to a mental grammar

"What about people who speak ungrammatically, who say things like We ain't got no bananas'? They obviously don't have grammars in their heads."

Prescriptive vs. Descriptive Grammar
Prescriptive: what you have to be taught in schoo
"Don't end a sentence with a preposition."
" 'Ain't' is not a word."

Descriptive: what you pick up from being a native speaker of the language
"We ain't got no bananas."
*Ain't no we got bananas.
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

Possible objections to an unconscious rule set
"When I talk, the talk just comes out - I'm not consulting any rule set." $\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$
$\qquad$

## Possible objections to

 an unconscious rule set$\qquad$
$\qquad$

Analogy: wiggling your fingers
When you want to wiggle your fingers, you "just wiggle them"

But your finger-wiggling intention was turned into commands sent by your brain to your muscles, and you're never conscious of the process unless something interferes with it. Nonetheless, there is a process, even if you're not aware of it.
